About Business Impact Benchmarks

These benchmarks are made up of learnings from past business cases Genesys has built for customers, with the ranges of benefits representing a median average of impact they have perceived as potential optimization for their operations, and maturity at the time. The impact calculators Genesys employs allows our customers to use these benchmarks as references, take their own data and reasoning, and estimate levels of optimization that are applicable to their operation. This allows Genesys to arrive at use case benefits that are logical, fully aligned to our customers' guidelines and considering their business needs in specific. Historically, this approach is what makes these benchmarks as close to reality as possible, but still, it requires our customers validation.

Business Value Projections

Following is the list of benefits you have selected with its projected annual value, and expected value at the end of 3 years.

\$5,411,831

Annual Value

\$-0

First Year Benefit

\$5,862,810

3-Year Value

\$4,882,575

3-Year NPV with 10% Hurdle Rate

Benefit name		Year 1 value	After 3 years
Agent Copilot	Reduced Voice Handle Time with Real-time Knowledge Automation	\$0	\$175,604
	Reduced Digital Handle Time with Real-time Knowledge Automation	\$0	\$1,227,812
	Reduced Voice After Call Work with Auto-summarization	\$0	\$101,600

Calculations Appendix

Agent Copilot

Reduced Voice Handle Time with Real-time Knowledge Automation

Reducing handle time demonstrates the operational efficiencies required to provide better customer service. Analyzing cost per interaction and savings reveals clear operational and financial benefits.

Genesys Copilot provides agents with knowledge exactly when needed, reducing their workload and eliminating the need for extensive research, saving time, accelerating interactions, and decreasing average handling time (AHT).

Inputs

Average monthly number of inbound calls before IVR	27,000
Percentage of calls currently sent to IVR	100.0%
Percentage of calls going to the IVR that are completed in the IVR	20.0%
Percentage of monthly calls abandoned before reaching an agent	9.0%
Average handle time in seconds for inbound calls	900
Inbound agent utilization rate	80.0%
Annual fully burdened inbound voice agent cost	\$68,850
Average carrier cost per minute for inbound toll-free calls	\$0.0150
Percentage of agent voice interactions eligible for knowledge surfacing	80.0%

Reconciliations

Number of interactions going to the IVR	27,000
Number of interactions completed by the IVR	5,400
Number of interactions queued to agents	21,600
Number of abandoned interactions	1,944
Number of inbound voice interactions handled by agents	19,656
Number of available hours excl. workdays off in a year	1,429
Fully loaded cost of an inbound agent (per second)	\$0.0134
Average cost for labor + telephony cost (per second)	\$0.0136
Total annual demanded hours to handle interactions	58,968
Number of agents required to support current interactions	41.3

Projected Transformation

Reduction of handle time with Knowledge Surfacing	7.0%
---	------

Impacts

Estimated time saved in seconds with Agent Copilot per month	990,662
Total cost associated with time saved by Agent Copilot	\$13,508
Estimated reduction of seconds saved per eligible interaction	63
Estimated volume impacted with Agent Copilot per month	15,725
Normalized average handle time in seconds, across all voice interactions	850
Improved average handle time of eligible interactions, in seconds	837
Total amount of hours saved per year	3,302
Improved number of agents required to support interactions	39.0

Output

Annual Value	\$162,096
--------------	-----------

Agent Copilot

Reduced Digital Handle Time with Real-time Knowledge Automation

Reducing handle time demonstrates the operational efficiencies required to provide better customer service. Analyzing cost per interaction and savings reveals clear operational and financial benefits.

Genesys Copilot automates knowledge delivery to agents during crucial moments, requiring minimal effort. This automation removes the need for research and saves time, leading to quicker interactions and reduced average handling time (AHT).

Inputs

Average monthly volume of agent digital interactions	175,000
Average handle time in seconds for digital interactions	180
Hours in a work week of digital agents	38
Total annual days off per digital agent (holidays, vacations, sick)	25
Percent of time available to handle digital as opposed to other interactions	25%
Digital agent utilization rate	80.0%
Annual fully burdened digital agent cost	\$68,850
Percentage of digital interactions eligible for Agent Copilot automation	80%

Reconciliations

Average monthly volume of agent digital interactions	175,000
Number of available hours off (annually)	190
Number of available hours excl. workdays off in a year	357
Potential agent digital interactions to impact	140,000
Fully loaded cost of an digital agent (per second)	\$0.0535
Total annual demanded hours to handle interactions	105,000
Number of agents required to support current interactions	294.0

Projected Transformation

Reduction of digital handle time with Knowledge Surfacing	7.0%
---	------

Impacts

Estimated reduction of seconds saved per eligible interaction	13
Cost associated with time saved per interaction	\$0.67
Estimated volume impacted with Agent Copilot per month	140,000
Improved average handle time of eligible interactions, in seconds	167
Normalized average handle time in seconds, across all digital interactions	170
Total amount of hours saved per year	5,880
Improved number of agents required to support interactions	277.5

Output

Annual Value	\$1,133,365
--------------	-------------

Agent Copilot

Reduced Voice After Call Work with Auto-summarization

AI-driven tools automatically create summaries of interactions, helping agents avoid time-consuming note-taking and paperwork. This enables them to address customer problems efficiently, enhancing productivity and service quality. After-call work is typically counted as part of handle time.

Creating interaction summaries can be tedious and prone to errors. Genesys Copilot streamlines this process, ensuring that every detail is accurately recorded and enabling agents to customize reports to their specific needs.

Benchmark		
18.0%	25.0%	32.0%

Normalized after call work time in seconds, across all voice interactions	151
Improved number of agents required to support interactions	7

Output

Annual Value	\$93,784
--------------	----------

Agent Copilot

Reduced Digital After Contact Work with Auto-summarization

AI-driven tools automatically generate summaries of interactions, enabling agents to avoid time-consuming note-taking and paperwork. This allows them to address customer issues efficiently, thereby enhancing productivity and service quality. The After Contact Work is included in the handle time.

Creating interaction summaries can be tedious and prone to errors. Genesys Copilot streamlines this process, ensuring that every detail is accurately recorded and enabling agents to customize reports to their specific needs.

Benchmark

Email

Reduced Email Interactions with Auto-Respond

Slow email response times and inconsistent replies can frustrate customers and delay issue resolution. Autoresponder technology enhances communications by providing instant acknowledgments and relevant information, thus improving efficiency and ensuring a consistent and satisfying customer experience.

Genesys Email streamlines email management and boosts efficiency, accuracy, and customer satisfaction through AI automation, intelligent routing, and omnichannel integration. Auto-suggestions, canned responses, and intelligent categorization enable agents to craft accurate replies quickly, enhancing speed and quality.

Benchmark		
25.5%	30.0%	34.5%

--------------	----------

Email

Reduced Email Handle Time with Auto-Suggest

Long email response times decrease agent productivity and frustrate customers. Auto-suggest technology provides agents with AI-generated response suggestions, relevant templates, and real-time solution recommendations, accelerating email management and allowing agents to respond more quickly, maintain consistency, improve overall efficiency, and enhance customer experience.

Genesys Email boosts efficiency, accuracy, and customer satisfaction with AI automation, intelligent routing, and omnichannel integration. It streamlines email management. Auto-suggestions, canned responses, and intelligent categorization enable agents to craft accurate replies quickly, enhancing speed and quality.

Benchmark

Forecasting and Scheduling

Improved Employee Occupancy

Low agent utilization due to imbalanced workloads reduces overall efficiency. Optimizing scheduling ensures employees remain engaged with meaningful work throughout their shifts, improving employee occupancy, maximizing productivity, and reducing idle time.

Workforce Management (WFM) improves workforce operations and boosts efficiency by minimizing overstaffing and refining forecasting and scheduling, leading to enhanced resource utilization across all channels.

Benchmark		
8.5%	10.0%	11.5%
Conservative	Likely	Optimistic

Inputs

Average monthly number of inbound calls before IVR	27,000
Percentage of calls currently sent to IVR	100.0%
Percentage of calls going to the IVR that are completed in the IVR	20.0%
Percentage of monthly calls abandoned before reaching an agent	9.0%
Average handle time in seconds for inbound calls	900
Number of full time equivalent (FTEs) inbound agents	350
Percentage of time on inbound calls as opposed to other interactions	80.0%
Inbound agent utilization rate	80.0%
Annual fully burdened inbound voice agent cost	\$68,850

Reconciliations

Annual Value	\$193,223
--------------	-----------

Forecasting and Scheduling

Reduced Support & Management Work Time

Supervisors and support teams invest considerable time in manual workforce-related tasks. Automated scheduling, real-time reporting, and AI-driven workforce management tools lighten the administrative workload, allowing support and management to spend less time on these tasks and enabling leaders to concentrate on strategic enhancements and employee development.

Workforce Management (WFM) offers automated rules and insights into business needs to reduce the time and resources spent on budgeting, investment analysis, what-if scenarios, sensitivity analysis, and crisis management.

Benchmark		
19.0%	29.0%	39.0%

Forecasting and Scheduling

Reduced Overtime Costs

Unoptimized staffing often leads to excessive overtime expenses. Accurate demand prediction balances workloads and optimizes shift assignments, reducing the need for overtime, decreasing overtime costs, and enhancing budget efficiency while maintaining service levels.

Workforce Management (WFM) optimizes operations and boosts efficiency via more precise forecasting, leading to reduced overtime expenses.

Inputs

Total annual days off per agent (holidays, vacations, sick)	25
Annual fully burdened inbound voice agent cost	\$68,850
Number of full time equivalent (FTEs) agents	350
Percentage of hours that agents are overtime	10.0%

Percentage of hours that are overtime	10.00%
Total number of hours spent in overtime annually	62,510
Cost of an agent per hour with overtime	\$57.82
Total annual cost of overtime expenditures	\$3,614,625

Projected Transformation

Reduction of agents overtime expenditure	30.0%
--	-------

Impacts

Total reduction of hours spent in overtime annually	18,753
Cost of an agent per hour with overtime	\$57.82
Improved percentage of hours that agents are overtime	3.00%

Output

Annual Value	\$1,084,388
--------------	-------------

Forecasting and Scheduling

Improved Reporting Capabilities

Manual reporting processes can be slow and prone to errors, delaying insights and decision-making. Automatic reporting, real-time dashboards, and AI-driven analytics ensure data accuracy and quicker analysis, improving reporting capabilities and enabling better decision-making and strategic planning.

Workforce Management (WFM) helps businesses optimize operations and enhance employee satisfaction through advanced reporting capabilities to reduce the effort for data production and validation, leading to significant savings in report generation and data consolidation.

Predictive Routing

Reduced Handle Time with Predictive Routing

Inefficient call routing can lead to longer handle times as agents spend extra time gathering context and transferring interactions. Using AI to connect customers with the best agents based on real-time data and historical performance could reduce time, resulting in faster resolutions, increased efficiency, and an improved overall customer experience.

Predictive Routing connects operational and business goals by optimizing customer service resources to increase revenue. It reduces average handle time (AHT) to cut costs, boost ROI, and lower churn.

Benchmark		
3.0%	5.0%	7.0%

Projected Transformation

Amount of time saved per call due to predictive routing	3.0%
---	------

Impacts

Estimated agent voice interaction volume to benefit from Predictive Routing	5,897
Estimated reduction of seconds saved per voice interaction	27
Total cost associated with time saved by Predictive Routing	\$0.37
Normalized average handle time across all voice interactions in seconds	892
Total amount of hours saved per year	531
Improved number of agents required to support interactions	40.9

Output

Annual Value	\$26,051
--------------	----------

Predictive Routing

Increased Sales Conversion with Predictive Routing

Connecting customers with the wrong agents can lead to missed sales opportunities and lower conversion rates. Using AI to match customers with the most suitable sales agents based on real-time data, past behavior, and agent performance could increase sales conversion, ensuring more personalized interactions, higher engagement, and improved revenue growth.

Predictive Routing uses artificial intelligence to adapt routing rules dynamically, personalizing customer experiences by connecting them with the appropriate agents rather than relying on static rules.

Benchmark

Speech and Text Analytics

Reduced Handle Time

Agents who take the time to identify customer issues and gather relevant information often have more extended interactions. Real-time analysis of conversations reveals intent, sentiment, and keywords, providing agents with immediate insights and suggested responses to streamline handling time, enhance efficiency, and improve customer experience.

Speech Analytics uses AI-driven conversation analysis to enhance customer interactions, transforming voice data into insights that improve agent performance, boost customer satisfaction, and reduce unnecessary talk time, increasing efficiency and revenue opportunities.

Benchmark

Supervisor Copilot

Reduced Supervisor Evaluation Effort with AI-Translate

Supervisors often spend significant time manually reviewing and evaluating multilingual interactions, leading to inefficiencies and delays. Real-time translation of customer interactions enables supervisors to evaluate conversations accurately without language barriers, minimizes evaluation effort, improves efficiency, streamlines quality assessments, and enhances global support.

Genesys Supervisor Copilot leverages AI to optimize agent performance in real-time, enhancing efficiency and reducing manual workload. Genesys Cloud AI Translate improves understanding and context analysis for multilingual evaluations, allowing supervisors to assess quality consistently across languages for smoother global operations.

Inputs

Number of supervisors currently working on multilingual activities	2
Average weekly working hours per multilingual supervisor personnel	38
Total annual days off per multilingual supervisor (holidays, vacations, sick)	25
Percentage of time spent by supervisors on multilingual activities	35%
Annual fully burdened multilingual supervisor cost	\$18,000

Reconciliations

Number of available hours off (annually)	190
Number of hours excl. workdays off in a year	1,786
Annual effort cost of supervisors on multilingual activities	\$12,600
Annual hours spent on multilingual activities per supervisor	625.1
Supervisor cost per hour	\$10.1

Projected Transformation

Reduction of multilingual supervisor effort	17.0%
---	-------

Impacts

Estimated number of annual hours saved per supervisor	106.3
Estimated total annual savings due to reduction of supervisor effort	\$2,142
Improved percentage of time spent on multilingual activities	29.0%
Estimated number of supervisor monthly hours saved	18

Output

Annual Value	\$2,142
--------------	---------

Supervisor Copilot

Reduced Quality Evaluation Time with AI-Summary and Insights

Manually reviewing entire interactions for quality assurance can be time-consuming and resource-intensive. Automatically extracting key points and sentiments from conversations allows evaluators to concentrate on critical areas. This process reduces evaluation time, accelerates assessments, and enhances workforce productivity.

Genesys Supervisor Copilot enhances operational efficiency by using AI to support supervisors in real-time monitoring and optimizing agent performance while minimizing manual tasks. The Genesys Cloud AI Summary streamlines review processes by summarizing interactions and delivering actionable insights on customer sentiment and agent empathy, enabling supervisors to quickly address issues and improve quality management.

Inputs

Number of personnel currently working on quality assurance activities	2
Average weekly working hours per QA personnel	38
Total annual days off per QA personnel (holidays, vacations, sick)	25
Percentage of time working on quality evaluations	10.0%
Annual fully burdened QA personnel cost	\$95,000

Reconciliations

Number of available hours off (annually)	190
Number of hours excl. workdays off in a year	1,786
Current annual cost of quality evaluation	\$19,000
Current monthly time spent on quality evaluation activities	29.8
Fully loaded hour cost of QA personnel	\$53.19

Projected Transformation

Reduction of quality evaluation time with AI Summary and Insights	37.5%
---	-------

Impacts

Estimated monthly quality evaluation hours saved	11.2
Estimated monthly savings due to AI Summary and Insights	\$594
Improved time working on quality evaluations	6.2%

Output

Annual Value	\$7,125
--------------	---------

Supervisor Copilot

Reduced Administration Costs with Supervisor Copilot

Supervisors often face administrative burdens related to performance monitoring, coaching, and reporting. Automating routine tasks like performance tracking, feedback generation, and workflow optimization lowers administrative costs, enabling supervisors to concentrate on strategic improvements, enhance agent support, and boost overall operational efficiency.

Genesys Supervisor Copilot employs AI to monitor and support agent performance in real-time, enhancing efficiency while easing administrative burdens. Meanwhile, Genesys Cloud reduces operational costs and simplifies workflows, improving customer experience and leveraging AI automation to streamline various quality processes.

Inputs

Current personnel working on QM administrative activities	2
Average weekly working hours per QA personnel	38
Total annual days off per QA personnel (holidays, vacations, sick)	25
Percentage of time spent on QA activity	25.0%
Annual fully burdened quality management personnel cost	\$95,000

Reconciliations

Number of available hours off (annually)	190
Number of hours excl. workdays off in a year	1,786
Quality management personnel cost per hour	\$53.19
Total current annual effort in hours spent on QA activities	893

Projected Transformation

Reduction of quality assurance management with Supervisor Copilot	32.7%
---	-------

Impacts

Estimated annual reduction of hours in quality management effort	292
Fully loaded hour cost of quality management personnel	\$53.19
Improved percentage of quality management time spent per year	16.8%
